Look a little closer

Puente de la Mujer brings Santiago Calatrava's sculptural engineering to Puerto Madero. The pedestrian bridge crosses Dique 3 between old dock buildings and the city's newer waterfront. Its tilted mast and curved profile evoke a tango couple, while its movable section allows boats to pass.

Something to notice

Pause on the dockside and compare the cables, reflections and brick warehouses. Look for the rhythm between the old port and the modern skyline.

A little consideration

Keep the pedestrian route clear, especially for wheelchairs and strollers. Do not attach locks to the railings; respect closures when the bridge moves or is maintained.
